

USE-CASE FLOW SPECIFICATION

Use Case ID: UC-02

Use Case Name: Detect Idle Cloud Assets

Preconditions:

1. Cloud billing data has been ingested into the portal.
2. The portal has access to the cloud billing information required for analysis.

Postconditions:

1. Idle or unattached cloud assets are identified.
2. The identified idle assets are highlighted for the user.
3. A monthly savings estimate is available for an identified idle asset.

Main Success Scenario:

1. The FinOps Analyst opens the Multi-Cloud Asset Cost Optimization Portal.
2. The system processes the available cloud billing data.
3. The system analyses cloud resource usage information.

4. The system identifies unattached storage volumes and idle compute instances.
5. The system flags the identified idle cloud assets.
6. The system calculates/displays the monthly savings estimate for the identified idle asset.
7. The system displays the identified idle assets to the FinOps Analyst.
8. The use case ends successfully.

Alternate Flow:

- 4a. No idle cloud assets are detected.
 1. The system does not flag any resource as idle.
 2. The system displays that no idle cloud assets were identified.
 3. The use case ends.
